Città del Vaticano

San Marino Ecorally

San Marino Ecorally was born in 2006 starting from Piazza San Pietro in Vatican City and arriving in Repubblica di San Marino ; it is an international race controlled by F.I.A. regulations and its aim is to promote and develop Alternative Energies vehicles with low environmental impact.

This new kind of competition exclusively turned to ecological vehicles is consistent with the innovative nature of Cars sporting competitions where in the past like in the present many technical concepts are tested through competitions. This event intends to show the spectators the performances of these vehicles and their adaptability to daily use.

The Regularity and Consumption tests are two different kinds of the Driving Test that F.I.A. has introduced to these competitions. Entrants obtain a single score, deriving from the absolute classification.

This score is valid for F.I.A. Competitors Test and for III & IIIA Categories, for IV, VII & VIII Categories and also for F.I.A. title, reserved to manufacturers.

The 4th San Marino Ecorally will start from the ancient Titano Republic (Repubblica of San Marino) and will pass through the central Italy regions, involving Sansepolcro (AR), Gubbio (PG), Assisi (PG), Torgiano (PG), Spoleto (PG), Magliano Sabina (RI) ROME and Castelgandolfo (SCV) cities.
